

Psychology: Check sheet

There are 6 content areas that should be looked upon as goals. The learner would work with peers and adults to come up with the projects for these learning goals.

1. Scientific Methods used in Psychology.
2. Developmental Psychology (This encompasses physical, cognitive, language, emotional, social, and moral development.)
3. Learning, memory, information processing, and language. (How do we learn, how to we remember?)
4. Personality, Assessment, and Mental health. (Psychological disorders, treatment, personality and assessment.)
5. Socio-Cultural (Topics such as conformity, obedience, perceptions, attitudes, and influence of the group on the individual.)
6. Biological Basis. (Focuses on the way the brain and nervous system function, including sensation, perception, motivation, and emotion.
